

Where are the areas with large amounts of gum?

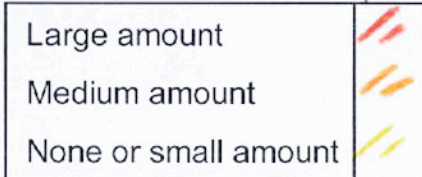

By the main block at the back between CM and AB is a small area of big amounts of gum. This is the old part of the school.

**Is there any patterns of where the chewing gum is found around the school site?**

Where are the areas with none or small amounts of gum?

By the front and the car park, down the left by the sports hall and the main hall.

Why do these patterns exist? Because the main block is busy. The new block is so new it hasn't had time to be covered in gum. This isn't what I expected to see, I thought the gum would be near the front.
