

## Scrambled words

Large festival sites like Glastonbury are like small temporary towns - 177,500 people went to Glastonbury in 2008. *Temporary migration* on this scale is bound to have environmental impacts.

### Task 1

Unscramble the following words to give a list of environmental impacts!

Scrambled word	Unscrambled word
INLLPUOTO	
BIHRUBS	
WGASEE	
ERICM	
EATWR	
FFTARIC	
YTEERLCICIT	

## Task 2

The following statements are all taken from a BBC News report in 2007 about the Glastonbury Festival. You must match each statement to the correct unscrambled word- write the word into the table below, next to each statement.

Statement	Unscrambled word
3,220 toilets are delivered to the site. They are emptied into large tankers which make 40 trips a day, to take the sewage 30 miles to Avonmouth, on the Bristol Channel	
1.5 million gallons are required each day. Over 10 miles of pipes have been built beneath the site over the years, but 1/3 of the daily needs are still transported in from a reservoir 7 miles away.	
2,000 old oil drums are used as bins for the 2,000 tonnes produced by festival-goers and workers during the weekend	
200 generators with 100km of cabling supply 30 megawatts over the weekend - as much as the city of Bath would use!	
The little roads around the site easily become jammed up. At peak times it can take over 7 hours to exit the festival!	
Noise, air, litter, light - all a problem when such large numbers of people congregate at a festival. They use lots of cars to get there, produce a lot of noise and a lot of litter. Lots of light is needed at the site.	
25,000 police hours are required - the festival is the largest policing operation in the south-west
