

# What happens if...scenarios

If one species in a food web becomes extinct.

Producers in the food web have been protected.

An oil spill has happened close to the habitat you are looking at.

A large storm has made the waves more destructive in the area.

The sea temperature has increased.

The amount of salt in the sea water has decreased.

A new species has moved into the habitat.

Increased fishing is happening in the area.

One of the top predators has been removed from the food web.

There is a sudden increase in nutrient levels in the ocean, causing an algal bloom?

If plastic pollution continues to increase in the oceans?

If a disease outbreak reduces the population of a key species?

If the population of phytoplankton decreases significantly?

If the area has a conservation protection order placed on it?

An international law is made banning the killing of certain consumers.

Humans create a new settlement in the middle of your ecosystem?
